## Where do your Feathered and Furry Friends Live?

List the animals/birds/insects you see and where you see them. Do you think the animals live in these places? If not, what do you think they're doing in that location?

Do a bird count. Stay at a location 10 minutes, and count the number of birds you see. Then move to a different location, and count again. Compare. Why was it the same and/or different?
